Executive Summary

1.0 EXECUTIVE SUMMARY

1.10 Accidental Release Prevention and Emergency Response Policies

The Atlas Logistics Retail Services LLC (Atlas) Distribution Center and Produce Facility refrigeration systems use pure anhydrous ammonia (a commonly used refrigerant for industrial systems) as the refrigerant. Given the quantity handled, anhydrous ammonia is considered a hazardous substance by EPA. Many of the properties that make ammonia valuable as a refrigerant also require that precautions and procedures be in place to protect employee and public health and safety during a chemical emergency. It is the policy of Atlas to be in compliance with all applicable federal and state rules and regulations.

We have a written Process Safety Management (PSM) plan for each process in accordance with 29 CFR 1919.119. A crucial component of these plans is the Emergency Response Plan, developed in compliance with the Emergency Response provisions of 29 CFR 1910.120. The Emergency Response Plan includes pre-emergency planning and coordinating with outside parties. This enables those who deal with emergencies to have a course of action to effectively deal with unplanned events.

- 1.20 Facility Description And Substances Handled
- Atlas stores and distributes refrigerated and non-refrigerated foods. Storage requires the use of refrigeration systems to preserve the product integrity. These refrigeration processes use ammonia as the refrigerant. Access to the facility is restricted to authorized employees, management personnel, and contractors.
- The regulated substance handled at this facility is anhydrous ammonia.
- 1.30 The worst-case release scenario(s) and the alternative release scenario(s), including administrative controls and mitigation measures to limit the distances for each reported scenario.

Release scenarios were modeled using RMP*Comp (Version 2.01), a software program developed by the National Oceanic and Atmospheric Administration (NOAA) and EPA. Offsite receptors were defined using ESRI ArcMap 10.1 in conjunction with Google Maps. This system estimates residential population within the circle defined by the endpoint of the worst-case and alternative release scenarios. In addition, it lists whether certain types of public receptors and environmental receptors are within the circles.

1.40 General Accidental Release Prevention Program And Chemical-specific Prevention Steps

Atlas complies with EPA's Accidental Release Prevention Rule and with all applicable state codes and regulations. The design and construction of this facility was in accordance with published standards, tests or recommended methods of trade, industry or governmental organizations.

Atlas' written PSM plans incorporate many policies and procedures to ensure safe operation and maintenance of this facility. Plan elements essential to safe operation of the refrigeration systems include employee participation, process hazard information, process hazard analysis, operating procedures, training, contractor safety, pre-startup safety review, mechanical integrity, management of change, hot-work permits, incident investigation, emergency response and planning, and compliance audits. These plans will be reviewed periodically and updated as necessary by the Safety Coordinator in conjunction with the refrigeration department.

1.50 Five-Year Accident History

There has been no significant release of ammonia at Atlas in the past five years.

1.60 Emergency Response Program

Atlas has a written Emergency Response Plan developed to ensure that precautions and procedures are in place to protect employee and public health and safety during a chemical emergency. It complies with the provisions of OSHA emergency Response regulations, 29 CFR 1910.120. The Emergency Response Plan includes pre-emergency planning and coordinating with outside parties. This enables those who deal with emergencies to have a course of action to effectively deal with unplanned events.

EPA Facility Identifier: 1000 0015 6877 Plan Sequence Number: 1000033358

This plan has been reviewed with the Tolleson Fire Department, and approved by the Arizona Emergency Response Commission (AZSERC).

The approach in the development of this plan has been to identify the ammonia emergencies most likely to occur at Atlas and establish precautions and procedures to protect life, safety and health during an emergency. The refrigeration processes have back-up prevention systems to keep processing malfunctions from becoming ammonia release emergencies.

The role and procedures for obtaining external emergency assistance will be formally established with the Tolleson Fire Department, including the Maricopa County HazMat Team. The Emergency Response Plan also includes procedures for notification of any potentially affected neighbors.

All Atlas personnel will be trained to fulfill their designated responsibilities in an emergency. Mock emergency drills will be held periodically to maintain familiarity with response actions and identify plan elements requiring improvement.

This plan will be reviewed annually and updated as necessary by the Atlas Lead Refrigeration Technician.

1.70 Planned Changes to Improve Safety

Any upgrades or extensive maintenance work performed in the future will be in compliance with those standards applicable at that time.

Atlas identified recommendations to improve safety during the most recent compliance audit in February, 2011. These recommendations are scheduled to be completed by June, 2013.
